

ENGINEERING SERVICES

In addition to producing customized parts for our customers, Barr is also well equipped to provide high quality engineering services.

As stated in one of Barr's Mission Statements (see [Overview](#)), we aim to "provide the most differentiated thin film coating solutions". Having actively participated in the most challenging work in the optical filter industry throughout its 30 plus years of history, Barr has developed an impressive range of thin film and optical filter engineering capabilities.

Examples of engineering tasks where Barr can help you reduce project risk and enhance the value of the filter in your system include:

- Application engineering to meet your system requirements
- Proposal support
- Product design
- Process development
- Prototype manufacturing and evaluation
- Test program development

Please contact barr@barrassociates.com with any specific or general inquiries about the services that we provide.
